Zeolite- a potent detoxifying agent

Zeolite is a dietary supplement that can help your body in eliminating harmful elements that have gathered in your body with time, such as heavy metals, mycotoxins, and virus particles. It helps you improve your general health and promote your body's natural detoxification processes.

Discovery

Zeolite gets its name from the Greek words *zéō* "boiling" and *líthos*, "stone," because it forms when volcanic lava meets the sea. Zeolites were used in ancient Rome to purify water and were even lined along aqueducts. The first ever Roman aqueduct was built in 312 B.C. and the last one in A.D. 226 was 14 miles long.

Why is zeolite needed?

Over time, our bodies can collect harmful substances which have been linked to different neurological diseases such as autism, ADD/ADHD, anxiety, depression, Parkinson's disease, dementia, and Alzheimer's disease. The accumulation of lead and mercury in the body has been linked to learning disorders and disruptions in the gut microbes, which can lead to neurological diseases. In addition, cardiovascular diseases like hypertension and cardiac rhythm disorders have also been linked to the accumulation of lead and the body's inability to use calcium, an essential mineral for all our body cells. Exposure to lead, arsenic, cadmium, and mercury has also been linked to kidney disease. Agricultural chemicals like Round-Up (glyphosate) are a major cause of reproductive problems primarily infertility.

Glyphosate and its hazards

Glyphosate which is better known as Roundup is a commonly used herbicide that is sprayed on crops such as wheat, corn, soy, and perhaps cotton. Its ingredient is found in over 750 products worldwide. the World Health Organization's International Agency for Research on Cancer and California's state environmental protection agency both have declared it to be a cancer-causing agent.

Human beings can indirectly ingest glyphosate and can land themselves in great danger. This product enters your body and disrupts the functioning of your system in every possible way. For instance, it can be linked to multiple infections and allergies, and also several other autoimmune ailments like diabetes, autism, multiple sclerosis, etc. Surprisingly, it does affect your digestion process leading to a condition called the "leaky gut".

Common symptoms of this toxin include fatigue (CFS), Attention-Deficit / Hyperactivity Disorder, restlessness, panic, doom, and more often mood swings. Infertility is a common danger since glyphosate act as an endocrine-disrupting chemical.

Magnetic action of zeolite

Zeolites are natural minerals that have a unique cage-like structure with a negative charge. This structure starts swapping elements like calcium with toxic elements like aluminum, lead, and mercury. Zeolites can trap heavy metals, real and synthetic poisons, germs, radioactive elements, and metabolic waste. Once a zeolite binds to a toxin, it can be discharged from the body through sweat, urine, or stool. That is why zeolites are often used in natural medicine as a powerful detoxifying agent. By helping eliminate these toxins from our bodies, zeolites can help eradicate health problems further

Therapies- a necessary cure

Today, more people are turning to IV chelation therapies. However, one harm is that some doctors may not be aware of natural options like Zeolite ClearDetox Pro or may not know that important minerals like calcium, phosphorous, magnesium, and zinc need to be added back to the patient's IV during chelation to avoid depletion of these vital minerals. When these minerals are removed, they can have a remarkable impact on the body's cells. IV chelation therapy is an intravenous treatment that can eradicate heavy metals from the body, but can also cause unwanted side effects. Due to its high cost, many people stop doing IV chelation, which results in the recirculation of toxins in our body and it becomes more hazardous for our health.

ClearDetox Pro? The next approach

The research was performed to check if activated zeolite can remove heavy metals from the body without removing important minerals. The inventor of ClearDetox Pro, Dr. Nikolaos Karpanos spent over 10 years researching and developing this safe alternative. This product is special because it allows the zeolite to pass through the cell membranes and the study revealed that using zeolite daily can be a safe and practical way to eliminate poisonous metals from the body without affecting the crucial minerals and electrolytes.

Power of zeolites

Toxins or pathogens can be introduced in our bodies through the surroundings like the air, water, and most importantly the food that we consume. Once they enter our bloodstream, they start to harm the performance of the immune system and grow stronger in our bodies.

Zeolites are known for their ability to detoxify the body, which is one of their most scientifically supported benefits. Unlike weaker detoxifying agents like chlorella or cilantro, zeolites have a powerful negative charge that ensures that they don't release the toxins once they have bound to them.

Common gut issues are caused by the penetration of unwanted pathogens, particles, and toxins that leak into the bloodstream and cause various health problems. Studies have proved that zeolite supplementation can improve intestinal wall wholeness and aid in reducing inflammation, making it useful for maintaining good gut health.

In essence, zeolite is a powerful detoxifying mineral that helps maintain general health and aid in fighting against several disease-causing agents in the body.

ClearDetox Pro is the only patented Zeolite in the world capable of crossing the cellular membrane to remove the toxins that wreak havoc on our immune system.

Contact me on how to order and get started with removing the toxins which are at the root cause of inflammation.
